Final Project Overview

Skills Network

Estimated time needed: 90 mins

You will have the opportunity to take your Django skills and implement them in a project. You will receive a boilerplate code for an Online Course app to work with.

Then using the skills you learned in this course, you will plan and implement the improvements in the application; these improvements include:

1. Create Question, Choice, and Submission models
2. Create a new course object with exam related models using the admin site
3. Update the course details template to show questions and choices
4. Create a new exam result template to show the result of the submission
5. Create a new exam result submission view
6. Create a new view to display and evaluate exam result

Review Criteria - 15 marks total

1. Implement changes in Question, Choice and Submission model. **3 marks**
2. Register models. **3 marks**
3. Get admin site working. **1 marks**
4. Design Course Details section. **2 marks**
5. Wite function based views. **2 marks**
6. Write urls for access. **2 marks**
7. Show final result. **2 marks**
